

National Student Clearinghouse (NSC) - Student Graduate Tracker Enhancement

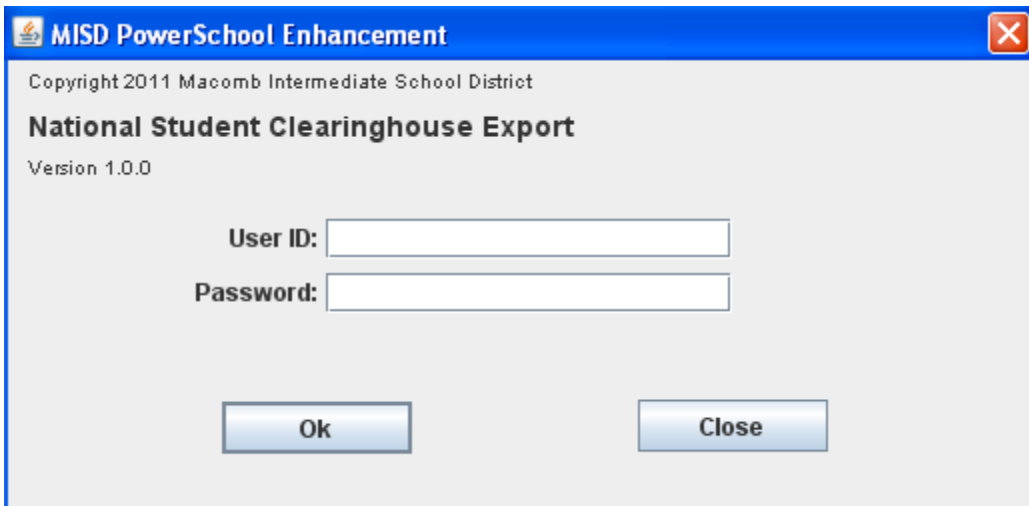

Macomb ISD is facilitating the opportunity for local high schools to participate in the National Clearinghouse Student Data Tracker Project. Schools across the state are using this as a way to gather School Improvement information for state reporting.

In reviewing the data needed by the National Student Clearinghouse (NSC), we have determined that a PowerSchool enhancement program will simplify the task of creating the files specified by NSC. This program will be run by the district or school from PowerSchool.

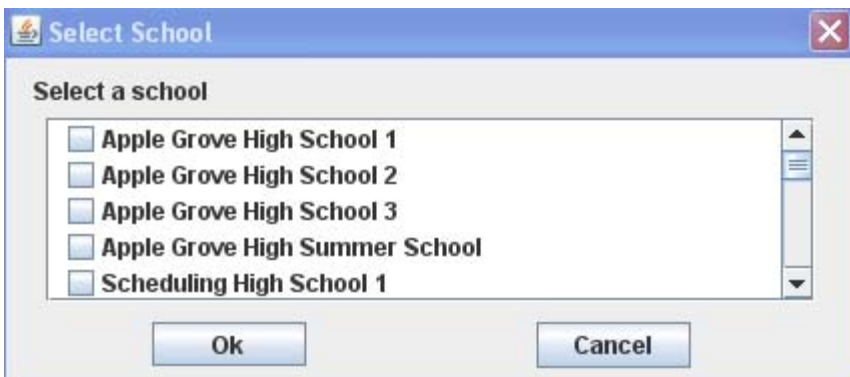

With a couple of clicks this enhancement program will build the export file in the format required by NSC. The enhancement program should require no training. It will be a simple matter of selecting the school, clicking in a list of students those who will not be graduating, entering the school's ACT number, NSC District Code and selecting a folder and name for the exported file using a Browse button.

This will include the special header and trailer record defined in the specifications. The user will then follow the directions they received from NSC for processing this file through the StudentTracker Graduates system.

This enhancement can be accessed within PowerSchool through the MISD Enhancements link. You will be prompted to key in your district User ID and Password.

After logging in you will select a school and click OK.

You will then see the main National Student Clearinghouse Export screen. You may use the Select All, Clear All, Clear Inactive button to perform mass selection or de-selection of students.
