

MEMORANDUM
Administration

TO: Superintendents

FROM: Mike DeVault, Superintendent

DATE: November 14, 2017

RE: Apprenticeship Roadshow

This week is designated Apprenticeship Training Week, and we want to thank the superintendents for arranging for your counselors, CTE personnel and a couple of your principals to attend the event today. We started out at the Detroit Electrical Training Center and partnered with several trade associations this morning.

Channel 7, WJR and The Macomb Daily all covered the event, and we were able to celebrate your participation on those media outlets.

Staff is visiting several trades today and attached are two quotes from counselors that were shared with the newspapers:

"I would love to bring students here to show them firsthand what is out there in industry. It could really change their lives. I can think of several students, right now, who would be a perfect fit for this program."

*Michelle VanVallis, High School Counselor
Eastpointe Community Schools*

"Events like this are so important! They allow the world of work and the world of school to connect; which ultimately fosters more meaningful and relevant conversations with students."

*Jennifer Case, CTE/Counselor
Chippewa Valley Schools*

Thank you.

Building Trades Apprenticeship Roadshow

OVERVIEW

The Michigan Building & Construction Trades Council and M.U.S.T. Construction Careers (Management & Unions Serving Together) is partnering with Macomb Intermediate School District to engage high school career placement professionals from across the county in a hands-on experience at a variety of Building Trades Training Centers. This day-long experience will convey not only information about careers, apprenticeships and opportunities within the union construction industry, it will also provide hands-on opportunities to experience several trades and focus on the math competency needed for skilled trades professionals today.

THE GOAL

Elevate the understanding of union construction apprenticeships, discuss what makes an ideal candidate for application, explore the role that advanced math (Algebra, Geometry & Trig) play in many of the trades and "get our hands dirty" with hands-on lab activities that bring each trade to life.

SCHEDULE

Tuesday, November 14, 2017 8am-3:15pm

Arrival at Detroit Electrical Industry Training Center,
2277 E. 11 Mile Road, Warren

Tour & Hands-On Labs

- Stop #1 - Electricians
- Stop #2 - Sheetmetal Workers
